

CORE Business Analytics.

'An essential tool to monitor, measure and grow your business.'

'With over 30 years' experience, Core Technology is Ireland's leading provider of comprehensive software solutions to market leaders in the agribusiness, agri-food and the agri-retailing sectors,' our readers are told.

'We have over 70% market share in dairy, over 50% in feed and grain and are rapidly expanding our market share in niche agri-retailing.

'Our solutions are built on 30 years R&D experience and knowledge of this niche vertical and we provide our customers with an innovative software management suite that enables them to run efficient, productive and flexible business models.

'The CORE Business Analytics solutions is an essential component of our product offering.'

Last year, CORE was acquired by Cultura Technologies a global agri-food software powerhouse.

Since the acquisition, CORE has significantly invested in its R&D capability, growing its talent pool and enhancing its solution offerings.

Among the CORE enhanced solutions is CORE Business Analytics.

This data driven product allows customers to benefit from having a single source of information and real time data repository.

CORE Business Analytics allows the organisation to create an enterprise-wide reporting system with the ability to analyse data using ad-hoc reports and dashboards and to further customise reports by adding data from other system sources, including spreadsheets.

CORE Business Analytics enables customers to use the data model and dashboard with the CORE database and ERP systems as standard (Out of the box).

Alternatively, CORE can also customise its Business Analytics platform to meet specific KPI needs.

This will allow the organisation to add data from other system sources, including spreadsheets, providing organisations with a comprehensive end-to-end suite for running the business, backed by the real-time performance and scalability that companies demand.

Jim Doyle a senior DBA with CORE Tech and the CORE Business Analytics Lead said that 'developments in CORE Business Analytics had come from listening to our customers and understanding their need to access and use large amounts of complex data in real time.'

This is why CORE Business Analytics includes the ability to setup timely alerts delivered to you by email or by SMS.

Mairead Cosgrave GM, Core Technology

Other features include, the use of digital agents to automate repetitive reporting tasks, including report bursting.

Data security can now be implemented per individual down to item and row level.

Jim also highlighted that CORE Business Analytics can run on any device that has a standard browser and internet connection meaning users now have the capacity to view dashboards on a mobile device while out of office.

CORE Business Analytics is built on the industry-leading Oracle Database and Business Intelligence toolset.

As an Oracle Gold Partner for over two decades this means that CORE can provide premium support to all its CORE Business Analytics customers ensuring they maximize the value of their CORE system.

Mairead Cosgrave GM for CORE Tech and Cultura Technology Ireland, went on to say: 'that data is the driver behind all businesses; it must be accessible, reliable and useful to enable better business planning, forecasting and resourcing.

'The CORE Business Analytics solution achieves all of this and more.'

Readers are encouraged: 'For more information on CORE Business Analytics and on CORE Tech in general please contact our specialists on 025 41 400, email us at info@coretechnology.ie or visit our new website www.coretechnology.ie

Herbst.

'Touchscreen ePOS is the way forward.'

With integrated ePOS, automation is a big advantage and a key differentiator over a traditional POS system that isn't fully integrated with accounts, says Herbst Software.

Herbst is an Irish business management software provider, operating for over 30 years and offering industry-leading business management software with ePOS for SMEs across Ireland and the UK.

The ability to fully control what the user can see and have access to at any given time can enable increased efficiency and control throughout, is one of the main messages here.

The ePOS can also support multi-branch capabilities, storing account information and pricing for individual customers, while allowing for special pricing and discounts as well as document authorisation for transaction approval.
